SAVE A LIFE

Stop opioid overdose.
Prevent a death.

- ✓ **BE PREPARED.** If a family member or friend uses opioids, have naloxone (or Narcan) on hand in case of overdose. Naloxone (or Narcan) is a prescription medicine that reverses an opioid overdose by blocking the opioid receptors in the brain. It helps a person wake up from overdose and begin breathing again. Ask your Tribal behavioral health provider, law enforcement, health provider, pharmacy, or a syringe exchange how to obtain Naloxone.
- ✓ **CHECK FOR SIGNS.** A person who has overdosed will have slow or no breathing, unconsciousness, blue lips or fingernails, and cool skin that is ashy and pale.

ACT FAST

Check for signs of opioid overdose

Call 911

Give naloxone (or Narcan)

Perform rescue breaths

Stay with the person until help arrives (and about two hours after the overdose)
